Height: 3 feet

Spread: 4 feet

Sunlight: ○

Hardiness Zone: 3b

Other Names: Pfitzer Juniper

**Description:**

Outstanding lacy, golden-yellow foliage makes this compact evergreen an excellent choice as a colorful accent; color is retained and deepens in winter better than other varieties; excellent choice as a garden accent or border planting

**Ornamental Features**

Sea Of Gold Juniper is a dwarf conifer which is primarily valued in the garden for its broadly spreading habit of growth. It has attractive gold evergreen foliage. The scale-like sprays of foliage are highly ornamental and remain gold throughout the winter.

**Landscape Attributes**

Sea Of Gold Juniper is a dense multi-stemmed evergreen shrub with a ground-hugging habit of growth. It lends an extremely fine and delicate texture to the landscape composition which should be used to full effect.

This is a relatively low maintenance shrub, and is best pruned in late winter once the threat of extreme cold has passed. Deer don't particularly care for this plant and will usually leave it alone in favor of tastier treats. It has no significant negative characteristics.

Sea Of Gold Juniper is recommended for the following landscape applications;

- Mass Planting
- General Garden Use
- Groundcover

**Planting & Growing**

Sea Of Gold Juniper will grow to be about 3 feet tall at maturity, with a spread of 4 feet. It tends to fill out right to the ground and therefore doesn't necessarily require facer plants in front. It grows at a slow rate, and under ideal conditions can be expected to live for approximately 30 years.

This shrub should only be grown in full sunlight. It is very adaptable to both dry and moist growing conditions, but will not tolerate any standing water. It is not particular as to soil type or pH. It is highly tolerant of urban pollution and will even thrive in inner city environments. This particular variety is an interspecific hybrid.
